

LK Antilegionella Manifold

PERFORMANCE / APPLICATION AREA

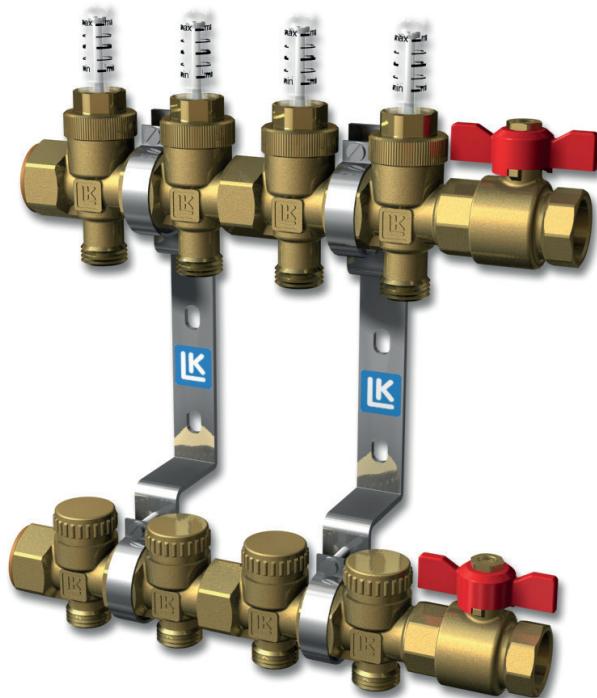

The LK Antilegionella Manifold is made of de-zincification resistant brass as per CW 602N EN 12165 with a Pb content of less than 2 %. The manifolds are delivered in modules of two, three and four circuits; each include pre-assembled ball valves. Manifolds can be extended by addition of 1-circuit valve set.

The manifold allows for a controlled circulation of both hot and cold potable water as well as water from heat exchangers and refrigeration plant to faucets via the LK Antilegionella manifold. Connect a t-piece as close as possible to the water mixers/taps to create recirculation of cold water and hot water back to the manifold.

In the lower manifold body (feed) there is an adjustable (by Allen Key) isolation valve. The valve is used as a shut-off valve when, for example, mixers are replaced. On the upper manifold body (return), there are adjustment valves with flow indicators that are adjusted by using a spanner.

LK Antilegionella manifolds can be supplied from both the right and left. Valves on both flow and return are metallically sealed. A capillary in the flow indicator ensures guarantees circulation through the whole indicator to prevent water stagnation.

Any unused circuits are fitted with specially manufactured brass blanking caps/hoods to prevent the risk of water stagnation. The LK Antilegionella manifold can be supplemented with fixing brackets, waterproof manifold cabinet and insulation, as necessary.

ASSEMBLING LK ANTILEGIONELLA MANIFOLD INSULATION

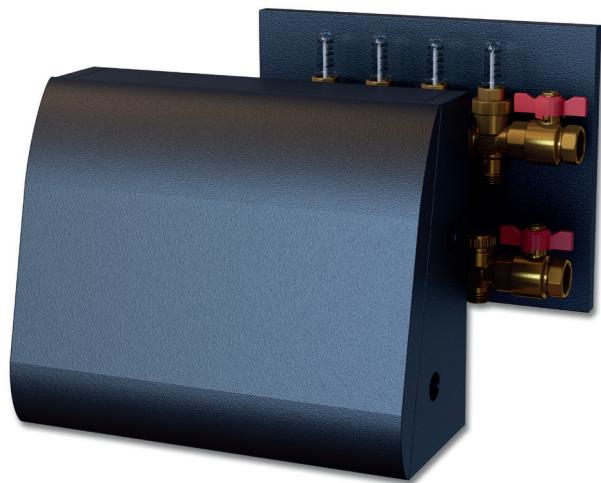

Step 1

Mount the brackets to the wall and place the back of the insulation over the brackets.

Step 3

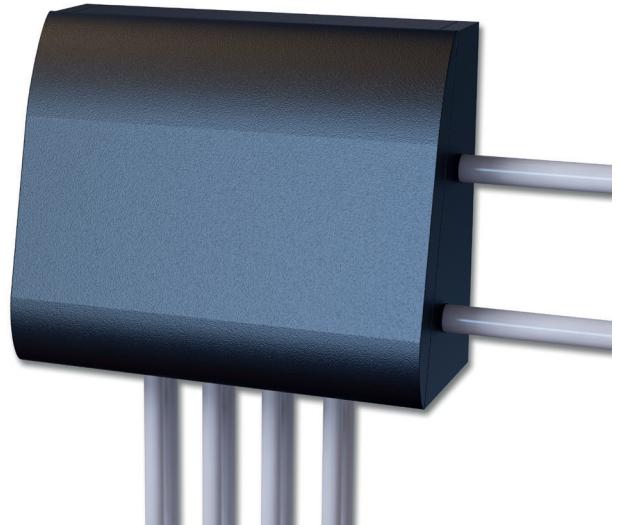

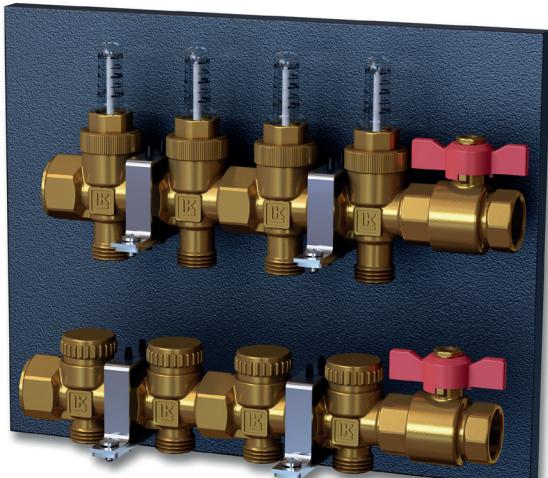

Attach the insulation cover.

Step 2

Assemble the manifold.

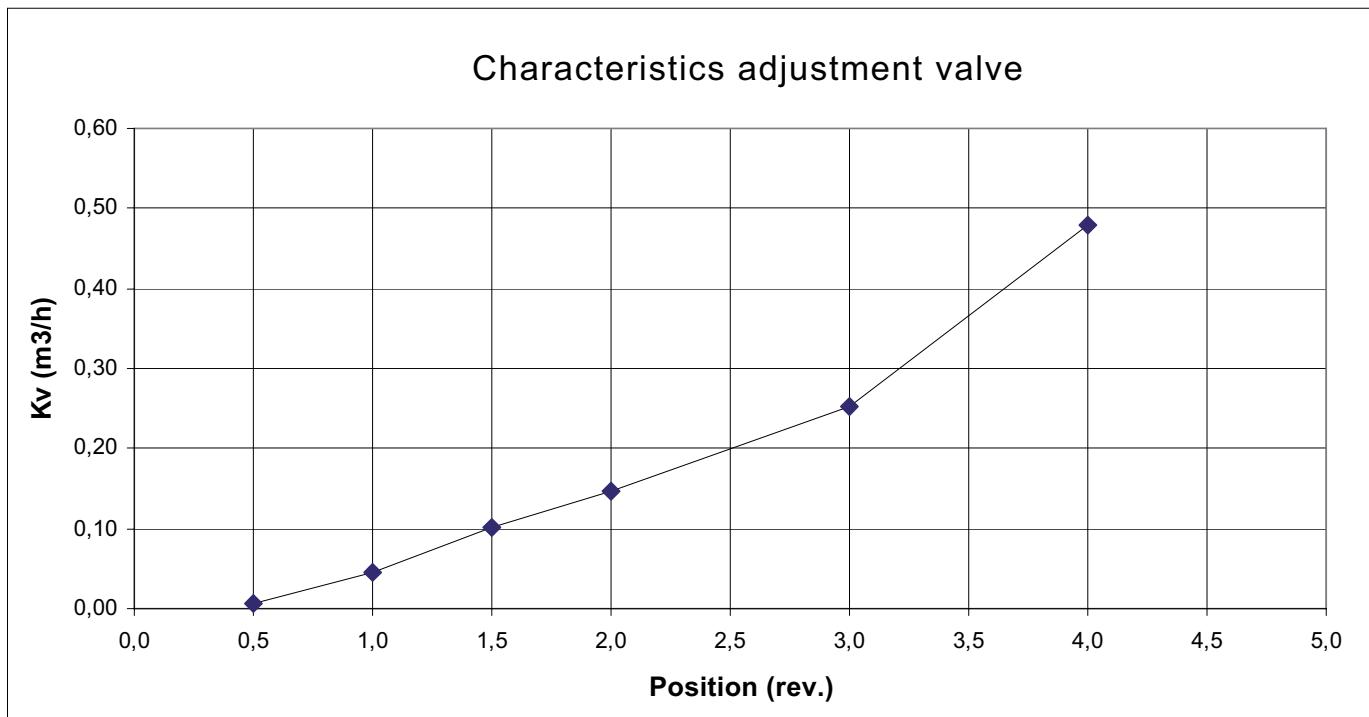

Pre-assembled insulation on LK Antilegionella manifolds.

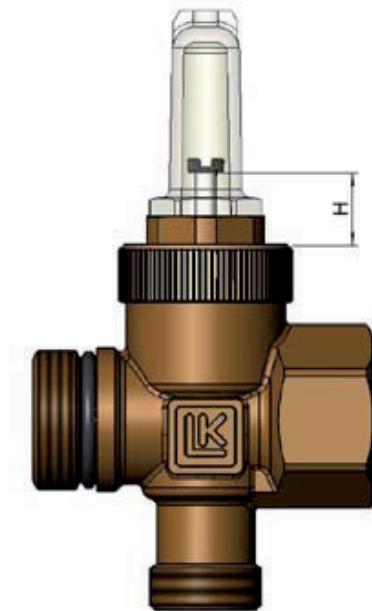

TECHNICAL DATA

General:	
Max working pressure	10 bar (1MPa)
Min / Max operating temperature	1 °C – 70 °C continuous
Max operating temperature 90°C short time	max 30 min – 2 times per day
Max differential pressure	0.15 MPa (1.5 bar)
Dim. connection main circuit	G3/4" ISO 228 int x ext
Dim. connection secondary circuit	D15 compression fitting (G1/2" ISO 228 ext)
Installation position	Horizontal
Isolation valve - manifold flow:	
Flow coefficient	Kvs = 2.7 m3/h (1)
Max flow	0.3 l/s
Max permitted leakage when cone is closed	0.1 % Kvs (metal seal)
Control valve and flow indicator - manifold return:	
Flow coefficient	Kvs = 0.45 m3/h
Regulatory area	1:10 (Kv = 0.05 ... 0.45 m3/h) in four runs
Accuracy of flow indicator	+/- 20 % max flow

Control Valve Features

Flow Indication Features

LK Antilegionella Return Valve

Position H mm	Flow l/min	Flow l/s
13	0	0
15	0.15	0.002
20	0.52	0.009
25	0.89	0.015
30	1.26	0.021

MATERIAL SPECIFICATION:

Brass valve house	CW 602N EN 12165 (CR) Pb <= 2 %
Brass pins	CW 602N EN 12164 (CR) (not Pb < 2 %)
Brass nuts	CW 617N EN 12165 (MS58)
Brass fittings in contact with water:	CW 602N EN 12164 (CR) (not Pb < 2 %)
Brass details not touching the water:	CW 617N EN 12165 (MS58)
Flow rate stainless (capillary tube)	CW 602N EN 12164 (CR) (choking)
Display Tray	PPS Fortron 1140 L (certificate KTW C113117-03 SF/unit)
Sight glass	PSU polysulfone S3010 (declaration BASF KT/KS E100)
O-rings	Rubber EPDM 70 WRc
Brackets	Steel – electro-zink plated; attenuator in NBR rubber
Insulation	EPS (closed cells) – not flame protected
Ball valve	CW 602N EN 12165 (CR) (not Pb < 2 %)
Brass house and lock	CW 602N EN 12165 (CR) (not Pb < 2 %)
Brass ball	CW 614N EN 12164 (MS58) chromium-plate
Brass spindle	CW 614N EN 12164 (MS58)
Knob	Aluminium
Nut	Steel – electro-zink plated
Manifold insulation	Polyethylene, LD18

Mounting and Fitting Provisions:

- Installation must be carried out according to the industry rules.
- Antilegionella manifolds must be mounted horizontally.
- Fitting should take place when all faucets are closed, that is, when there is no flow in the system.
- Fixing the pipes to be carried out according to LK's general assembly instructions for LK Universal.
