

LK Pipe Pole – double & quattro

DESCRIPTION

LK Pipe Pole is used temporary fixing for pipe assemblies to sub-floors/slabs to drains and radiators, etc.

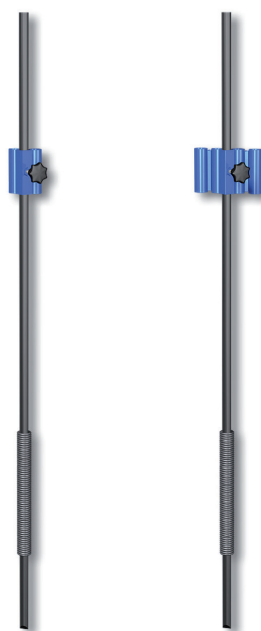

The pipe pole is reusable since it, as it is supplied with protective sleeves, the poles cannot become set in the concrete.

The pipe holder can be moved along the pipe.

The pipe pole is available in two models: for 25 mm conduit, with two pipe holders c/c 40, or with four pipe holders c/c 40-50-40.

ASSEMBLY

- The pipe pole is hammered through the insulation with a sledgehammer/hammer until it stands firm.
- The conduit sleeve is slipped on to prevent the pole from being cast into concrete.
- Tape the sleeves to the legs of the stand to prevent them from floating up during pouring.
- The holder is slipped on and tightened securely at the correct height.
